

Tomorrow,
today

The gap

There's a massive gap between research and business.

Universities produce innovation that stays in drawers while companies face the future with yesterday's tools.

LEAF exists to **close** this gap.

What we do

We explore emerging technologies and bring them into the present – through **consulting** that transforms how companies see their future, and **products** that make that future accessible to everyone.

The things we build today will be obvious in three years. But in three years, it'll be **too late** to get there first.

Our edge

Both our founders are university professors. This isn't a biographical detail. It's why we see connections others miss.

Every day, we bridge the **frontier** of research and the real **needs** of the market.

We speak the language of academia and the language of business – **fluently**.

We see before others do

Scout

We monitor and test emerging technologies while they're still noise. Our academic network is our radar.

We connect dots no one sees

Connect

Technology alone is worthless. Value is born when you link the right innovation to the right problem, at the right time.

We open eyes to what's coming

Unlock

Our work doesn't end with a deliverable. It ends when you look at your business and see possibilities that didn't exist before.

Two engines, one cycle

LEAF Advisory

We guide companies through transformation. We explore the future together, find non-obvious connections, and unlock a new vision of their business.

LEAF Labs

We build products. When a problem repeats across multiple companies, we turn it into something scalable and accessible to all.

The gluing layer

LEAF Academy

We turn frontier knowledge into shared capability. Academy is where research becomes language, language becomes practice, and practice becomes adoption.

The flywheel

Advisory discovers real problems.
Labs turns them into products.
Products attract new clients to Advisory.
Advisory discovers new problems.

Each engine **fuels** the other.
This cycle is our unfair advantage.

Advisory: show me the future

Scout Session

An intensive workshop where we map the emerging technologies relevant to your industry and identify the 3-5 opportunities you're not seeing yet.

Advisory: connect the dots

Connect Sprint

Connect the dots. A 4-8 week engagement where we take a strategic problem and reframe it through emerging technology. Includes rapid prototyping and proof of concept.

Advisory: change my perspective

Unlock Partnership

Change my perspective. An ongoing relationship where LEAF becomes your innovation partner. Continuous technology scouting, quarterly sessions, direct access to our academic network.

Labs: what we're building

Products born from the field, not from assumptions.

Every tool we build starts as something we needed ourselves or discovered through client work. We validate problems before we build solutions.

Our products sit at the intersection of academic research and real business needs – the same intersection where LEAF **lives every day**.

Who we work with

Established companies navigating industry transformation – manufacturing, healthcare, fintech, agritech, energy.

Ambitious startups looking for an unfair technological advantage in their early stages.

Public institutions with the funding and the will to innovate beyond the status quo.

What they have in common: they know their industry is about to change. They're looking for someone to show them where to look.

Why now

The gap between emerging technology and mainstream adoption is shrinking fast.

Three years ago, generative AI was a research paper. Today it's reshaping entire industries.

The companies that will lead tomorrow are the ones making moves today. Not with yesterday's tools – with tomorrow's.

That's what we mean by **tomorrow, today.**

The team

A small team at the intersection of research and execution.

Two founders who teach at university and build products.
Engineers who read papers and ship code.
Consultants who prototype, not just present.

We're small by design.
Our value is in **depth**, not volume.

What makes us different

No other company in Italy covers all five dimensions:

Strategic vision. ✓

Deep technical expertise. ✓

Direct link to academic research. ✓

Concrete execution. ✓

Products of our own. ✓

This is our position. And **no one** else holds it.

We don't just talk about the future.

We **build** it.

Let's talk

If you know your industry is changing and you're looking for someone who sees what's coming –
we should talk.
